The "Adjust-To-Fit" Security Door is designed to close against a door stop. If a door stop is not in the opening, install a door stop into the door frame on three sides. Allow at least a 1" (25.4 mm) depth from the face of the jamb.

Handle Height - measure from threshold up to the highest point of entry door knob/handle and add 4" for handle height on "Adjust-To-Fit" Door.

Inside Mount To Door Frame

- ① Measure door opening in three locations for both the width and height as shown, and provide the shortest dimension.
- ② For determining the **net door size**, deduct 3/4" (19 mm) from the shortest width measurement and 3/4" (19 mm) from shortest height measurement.

Example: A 35-1/4" (895 mm) x 79-1/4" (2013 mm) net door size will fit a 36" (914 mm) x 80" (2032 mm) opening.

"Adjust-To-Fit Doors" doors are a multi-bolt latch system, complete with an adjustable hinge and bottom channel with weatherstrip.

IMPORTANT:
TO ENSURE PROPER
TENSION IN MESH,
WE RECOMMEND
MID-RAIL(S) FOR
DOOR OVER 90"
IN HEIGHT

SPECIAL INSTRUCTIONS:

Doors are viewed outside looking in.
